

RAW, thoughtfully handed over.

RAF / 3FR · macOS · VERSION 0.9.7

01 PURPOSE

RAF / 3FR converts Fujifilm GFX100RF RAF files into X2D-style 3FR containers for editing in Hasselblad Phocus. The linear RAW payload remains the photographic source; optional rendering intent is stored in the editable Phocus sidecar.

DEFAULT

HNRR-safe ISO, Fujifilm Auto WB, per-file exposure, distortion and chromatic-aberration correction on. Vignetting unchanged.

NON-DESTRUCTIVE

Framing and rendering intent stay editable in Phocus. Exact metadata moves into standard or private XMP without replacing Hasselblad routing identity.
